

Domel's response to global copper price pressures

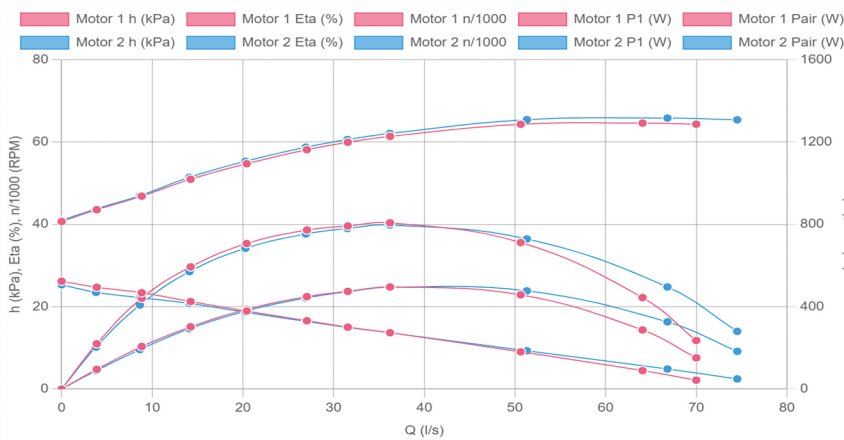

Global copper price volatility is increasing cost pressure across motor applications. Domel introduces an advanced aluminium-based solution that significantly reduces copper usage while maintaining equivalent performance.

- Copper prices remain highly volatile, with a sharp increase in early 2026.
- Aluminium prices are more stable, with gradual growth.

Proven Performance

Validated testing confirms that the aluminium-based motor delivers equivalent performance characteristics compared to traditional copper windings.

Key Advantages of Domel Motors

- Up to 50% less copper usage
- Up to 15% less electrical steel
- Up to 15% lower product mass
- Equivalent performance to copper-based solutions
- Improved cost stability in volatile material markets
